The Lab

L&S Lighting Intelligence

A tech and design journey through Light & Space

The Lab

Light is part of interior design: it shapes spaces and enhances the way people experience them. We bring nearly 50 years of expertise to every project: a laboratory for integrated lighting and modular furniture systems, where new applications are explored and integrated lighting solutions are co-designed for the home, from kitchen to living room to bathroom, as well as for retail, hospitality and workplace environments.

1. Smart light integration technologies
2. Products certified for international markets
3. High-efficiency solutions for sustainable design
4. Custom solutions, co-design and prototyping

/ Tech

For adaptive and intuitive lighting. The Adaptive Lighting and Full Touch technologies make lighting increasingly adaptive to the needs of the user, while enhancing the materials and finishes of furniture.

/ Design

Smart light, seamlessly integrated. Our lighting systems become an integral part of interior architecture and furniture design, with solutions that simplify the work of designers and manufacturers while enhancing the experience of those who live in these spaces.

Full touch

Full touch linear LED profiles to make lighting control intuitive and effortless.

With integrated touch-sensitive dimming, our linear LED profiles allow you to control the light with a simple touch anywhere along the profile. Switch the lights on and off or adjust the brightness for smooth, seamless dimming. Ideal for a wide range of applications, including kitchens, living rooms, libraries, bedrooms and bathrooms.

1. Touch everywhere
   Limitless control on both aluminum and plastic surfaces

2. Touch and control
   On/off, dimming and color temperature adjustment

3. Safe to touch, anywhere
   Steam-proof, splash-proof, worry-proof

Adaptive lighting
It adapts, you relax

Light is detail, rhythm, experience. The harmonious combination of natural and artificial light creates an ecosystem of wellbeing.

Our Adaptive Lighting Technology is an intelligent system that responds to generate lighting experiences. Our light source devices and ultra-wide CCT spectrum control are designed for dynamic integration and flexibility into any home, retail or hospitality spaces

1. Control your space
   Color temperature to create rich, earthy tones with warm glow or reveal the finest details with bright daylight

2. Adjustable color temperature
   CCT 1800 K–12000 K

3. Integrated smart control
   With Bluetooth modules and app compatibility

Electrified modular structures

Light, store, display

We design and manufacture modular electrification systems with integrated lighting for horizontal and vertical paneling where structure, power and light become a single element. Electrification is integrated into uprights and modules, with no visible cables, so every layout can be freely assembled, expanded and reconfigured while keeping a clean look and full functionality.

1. Concealed power, invisible impact
   Minimized visible wiring creates an integrated connection between shelves, cabinets and lighting

2. Easy and practical installation

3. Engineered for heavy loads
   The system can be equipped with ovens, shelves, cabinets and furniture

Ready-to-light solutions
Easy, smart, integrated

We offer the most comprehensive range of addressable LED lighting, for creating unique interiors and using light to add value to furniture.

The Moove Free Cut collection can be customized to the millimeter. At the heart of the system is a free-cut LED strip, pre-assembled in each profile, that can be cut at any point with no cutting-pitch constraints and no loss of functionality. The collection also features a new high-brightness LED light source and, above all, an innovative track-based electrification system for repositionable shelves. Together they bring a new level of ease of installation and design freedom to interiors.

1. Smart light system
   It's easy to control the light from our remote control, app or voice assistants.

2. Full compatibility
   We are fully compatible with the most important IoT smart protocols: Matter, Bluetooth, Zigbee, Casambi, DALI

We make your projects shine
