PROVIDER

L&S Lighting
Intelligence

Use the light
to enhance
the personal

experience
of the world.

OUR MISSION

Beauty, elegance and functionality.

PROTAGONIST
THROUGH LIGHT.

We love light, an apparently simple product, in reality more and more complex and non-trivial, which requires careful studies to offer the desired effect and quality both in terms of color rendering, energy efficiency

and durability, and in terms of aesthetic research to make the lighting solutions harmonious within your furnishings and fittings.

We support
you in making
your projects
shine.

With dedicated solutions that focus on the quality and effect of light to improve the visual experience and use of what is illuminated.

We read and interpret interior design trends to better enjoy the kitchen environment, the living and sleeping area, the new hybrid spaces for sharing, studying or working.

We are at the service of daily gestures to contribute to people's well-being and life quality.

We design integrated lighting systems.

Indoor lighting solutions.

- Lights to be integrated into furniture: linear lights, spots, light panels, sanitizing lights.
- Ceiling and wall lights: light panels, suspended, fixtures with integrated sound-absorbing panels.
- Aesthetic architectural lights.

Integrated systems.

- Can be used without the need to “couple” them to third party products: illuminated mirrors and electrified modular structures to compose and furnish walls in living rooms, shops, offices, bars or entire walk-in closets with a single solution.

Control systems.

- Power systems and related accessories. The complements needed to enhance the use of light.
- Remote control: wi-fi, bluetooth, Alexa and Google Home, voice control, radio controls, wire or battery sensors.

Lighting planning.

- As a support to define the most effective solution for the end use.

Design,
innovation
and expertise

at your
service.

A professional partner.

OUR STRENGTHS

01

Over 50 years of know-how.

Durable products, attention to detail and focus on design.

03

Capability of innovation and precision.

Continuous technological research.

05

Worldwide certification.

For the global market.

02

Industrial and logistics global platform.

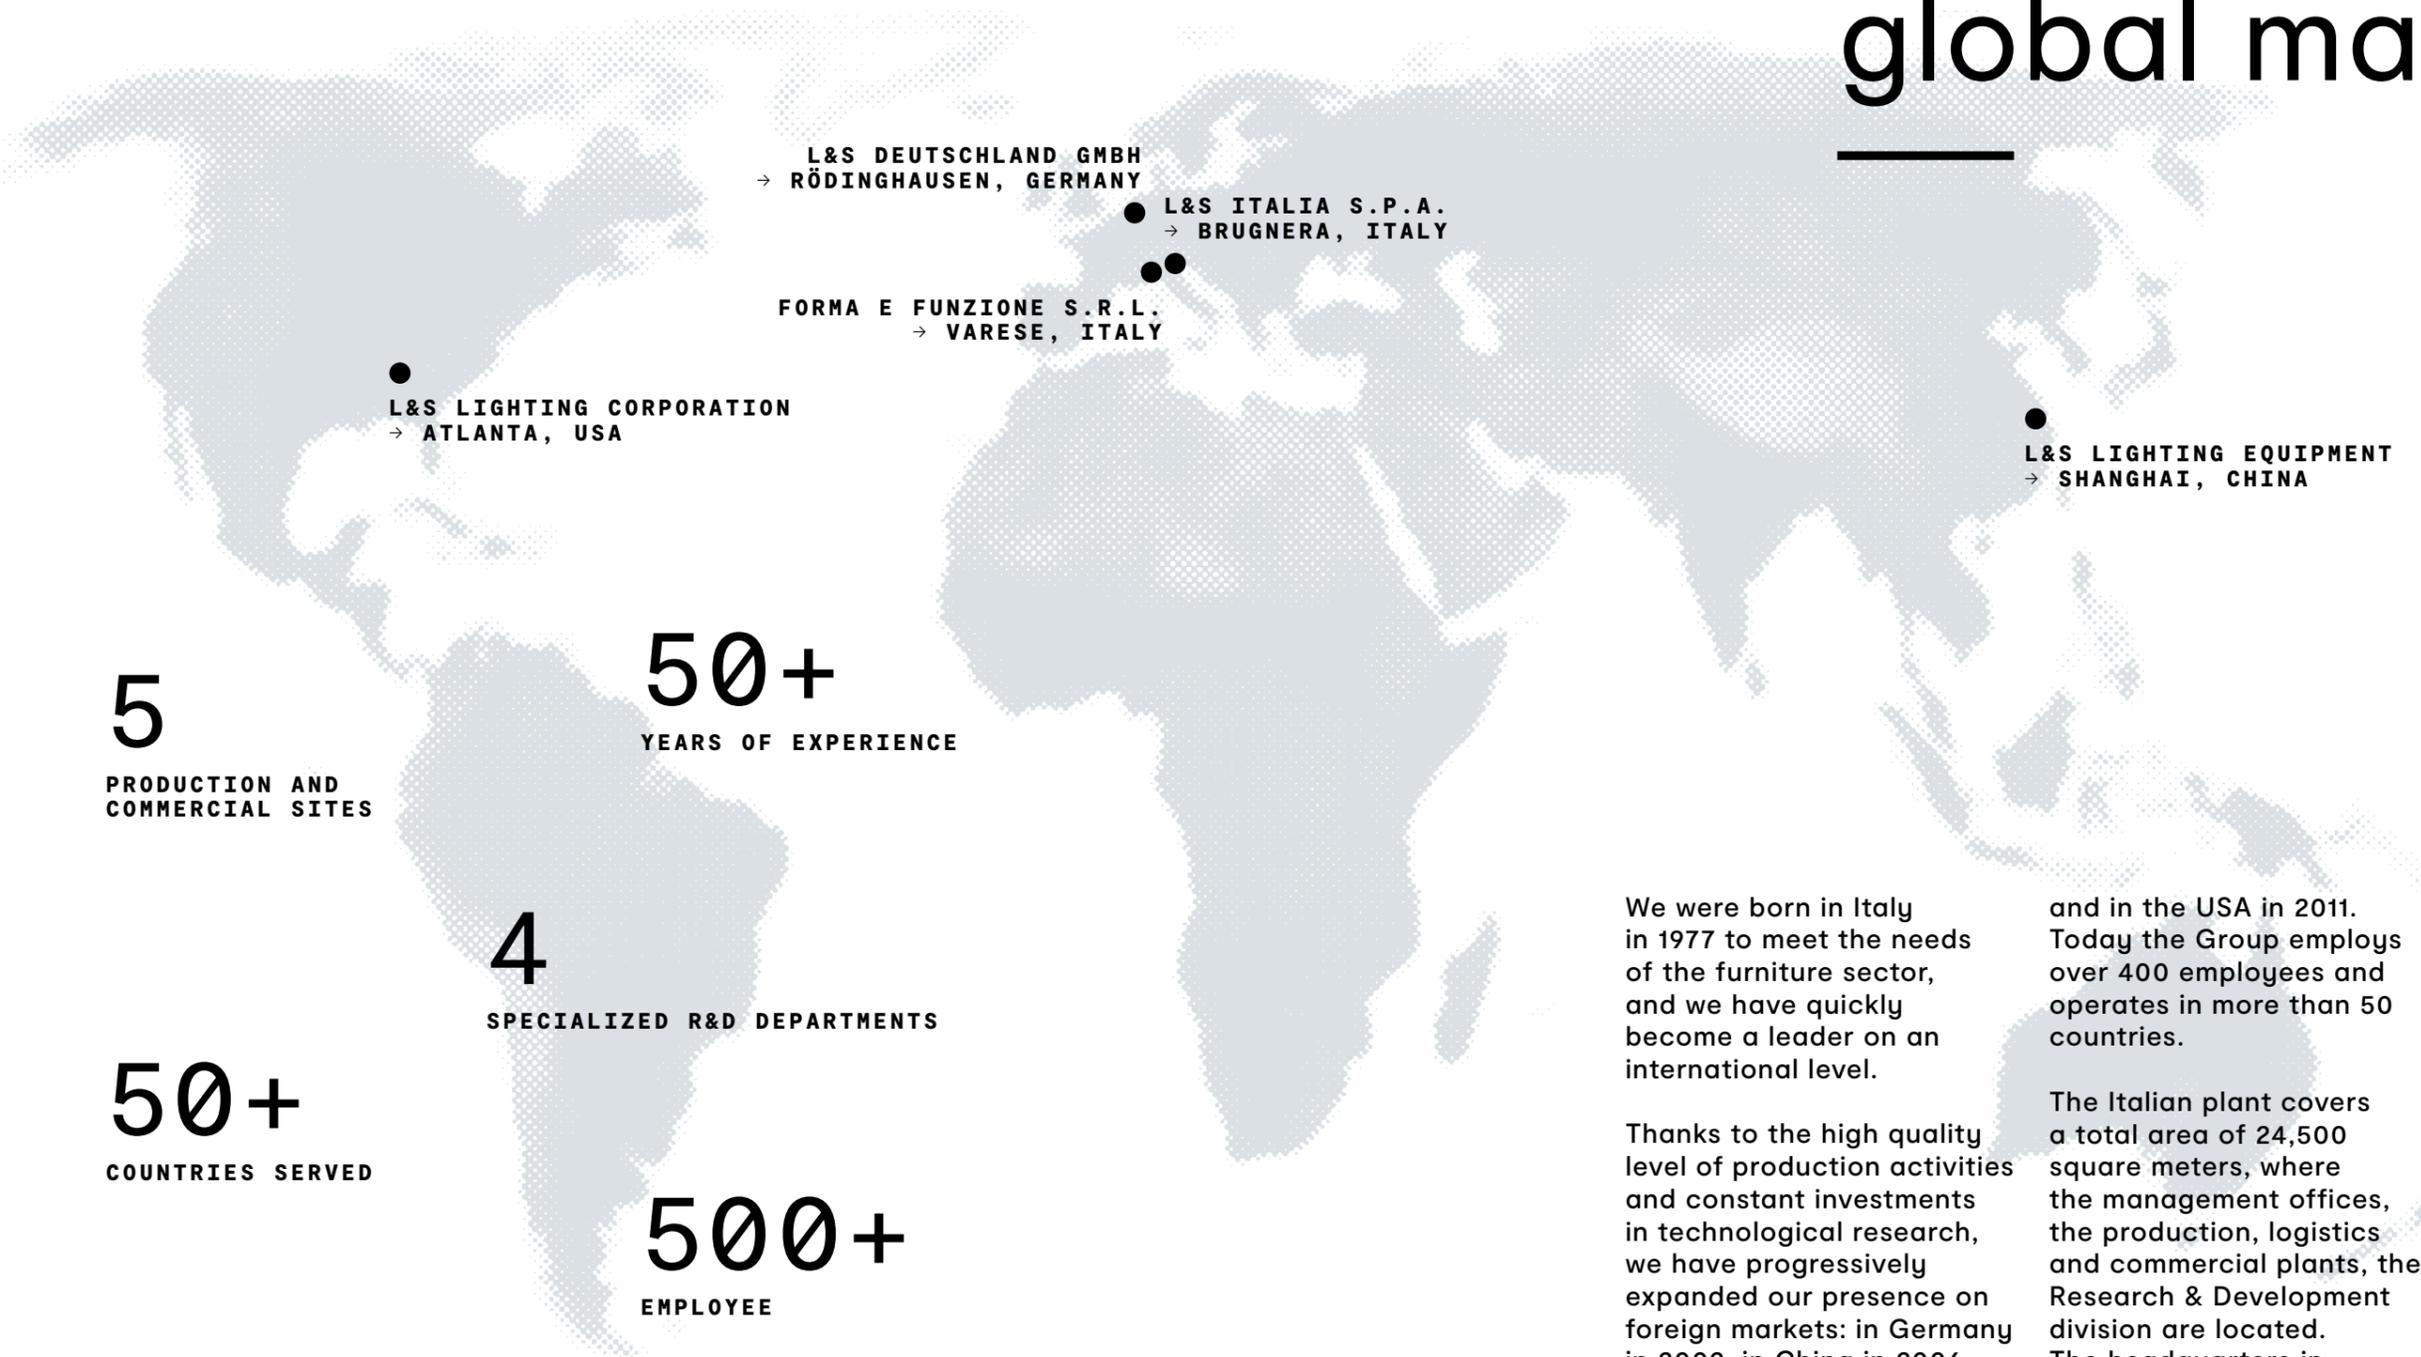

For an excellent service.

04

Tailor-made service.

Dedicated to every customer.

One international group, for the global market.

We were born in Italy in 1977 to meet the needs of the furniture sector, and we have quickly become a leader on an international level.

Thanks to the high quality level of production activities and constant investments in technological research, we have progressively expanded our presence on foreign markets: in Germany in 2002, in China in 2006

and in the USA in 2011. Today the Group employs over 400 employees and operates in more than 50 countries.

The Italian plant covers a total area of 24,500 square meters, where the management offices, the production, logistics and commercial plants, the Research & Development division are located. The headquarters in

Germany with its commercial action and attention to technology contributes to the expansion of the company in the European market.

The USA with their specific knowledge and China, specialized in the field of electronics and mechanics, develop their reference markets and are a logistic center for international customers.

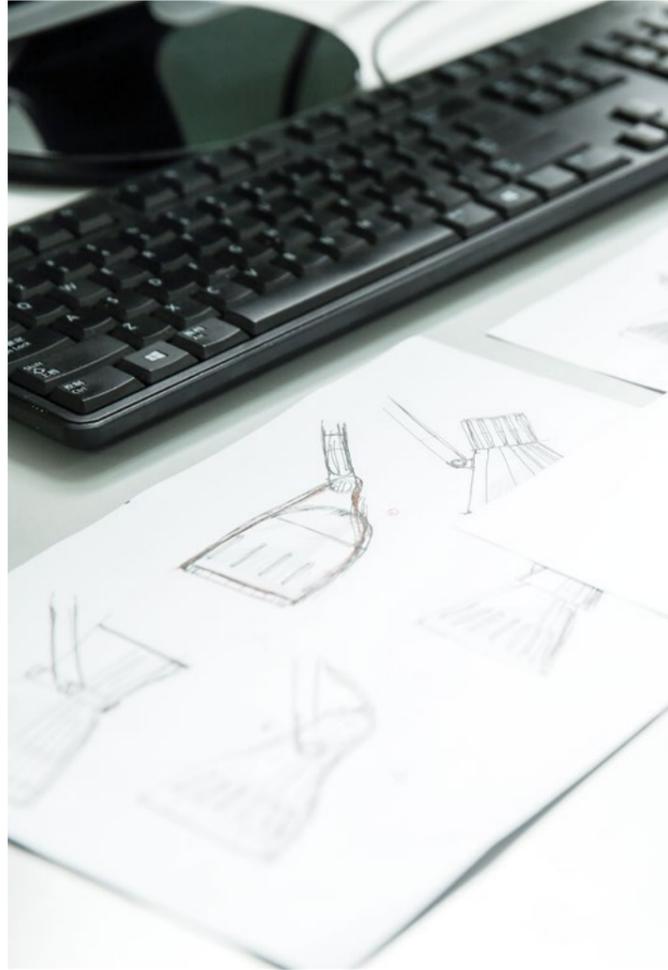

Innovation and research. Technology at the service of functionality.

The Technical and Research & Development Departments ensure a constant capacity for innovation in the lighting engineering field and provide for the development of customized projects and prototypes. The aesthetics of the products are taken care of by expert designers:

- Product development
- 3D Rendering
- Engineered Drawings
- Prototyping

In-house we have all the skills needed to meet the demands of the different markets.

A consultancy service to support you, production department disposability and international logistics capable of reducing delivery times. We offer high flexibility, concreteness and speed of response.

Bespoke solutions for furnishings and interior design projects.

Bespoke projects prototyping.

We are constantly in contact with the technical, quality and purchasing departments of the customers in order to design together the tailor-made solution to improve the daily experience of the end user.

Technologies
for comfort,

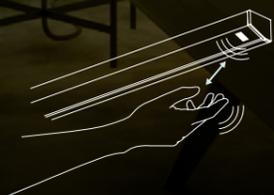

well-being
and safety.

Emotion technology: changing color has never been easier.

“EMOTION” TECHNOLOGY
ALLOWS TO EASILY CHANGE
THE COLOUR TEMPERATURE.

EDC

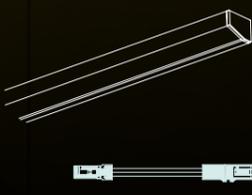

LAMP WITH
IR SWITCH

With a simple gesture of the hand in front of the sensor it is possible to turn the lamp on and off. The color temperature changes by holding the hand close to the sensor for 5 seconds.

EDC

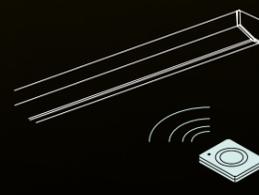

LAMP WITHOUT
IR SWITCH

Colour temperature turns warm or natural thanks to the Emotion Jumper.

Emotion/EDC

LAMP WITH
EXTERNAL CONTROLLER

Thanks to our remote controls it is possible to turn the lights on and off, dim and gradually change the color temperature.

Emotion is the innovative L&S system developed to manage, in a single lighting fixture, the gradual change of color temperature from warm (2700K) to cold (6500K) with a simple gesture.

The Emotion Dual Color EDC version of products equipped with IR, Infrared switch, allows the transition from 3000K to 4000K in just 5 seconds, simply by

bringing the hand close to the switch.

EDC products without on-board controller are equipped with “Emotion Jumper”, a converter cable that allows to change the color temperature without the need to have two different lighting devices.

An easily integrable system.

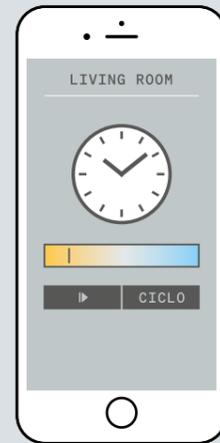

Emotion Dual Color can be integrated in most products. Furthermore, Emotion and EDC are compatible with the different L&S control systems, which allow to vary the color temperature gradually.

Light has a decisive influence on human well-being. Scientific research has shown that its effects operate on multiple levels: visual, cognitive, emotional and biological.

Hence the importance of being able to regulate the lighting of indoor environments, where we spend on average 90% of our time. Our HCL system, Human Centric Lighting, gives a simple and innovative answer to this need.

HCL technology.

It's a light sources management method that adapts the emission of light (both in quantity and in colour temperature) to the circadian cycles. The light changes according to the time to follow the biological rhythms of the human being, thus ensuring better visual comfort, concentration, relaxation and regularity of the internal clock that defines the alternation between wakefulness and sleep.

The HCL functions. Convenience and ease of use.

ON/OFF PROGRAM

Turn on more light points, dim the light and vary the temperature to make it as close as possible to the natural one.

LIGHT SCENARIOS

Set dedicated lighting scenarios based on your personal habits and the activities carried out throughout the day, from work to leisure.

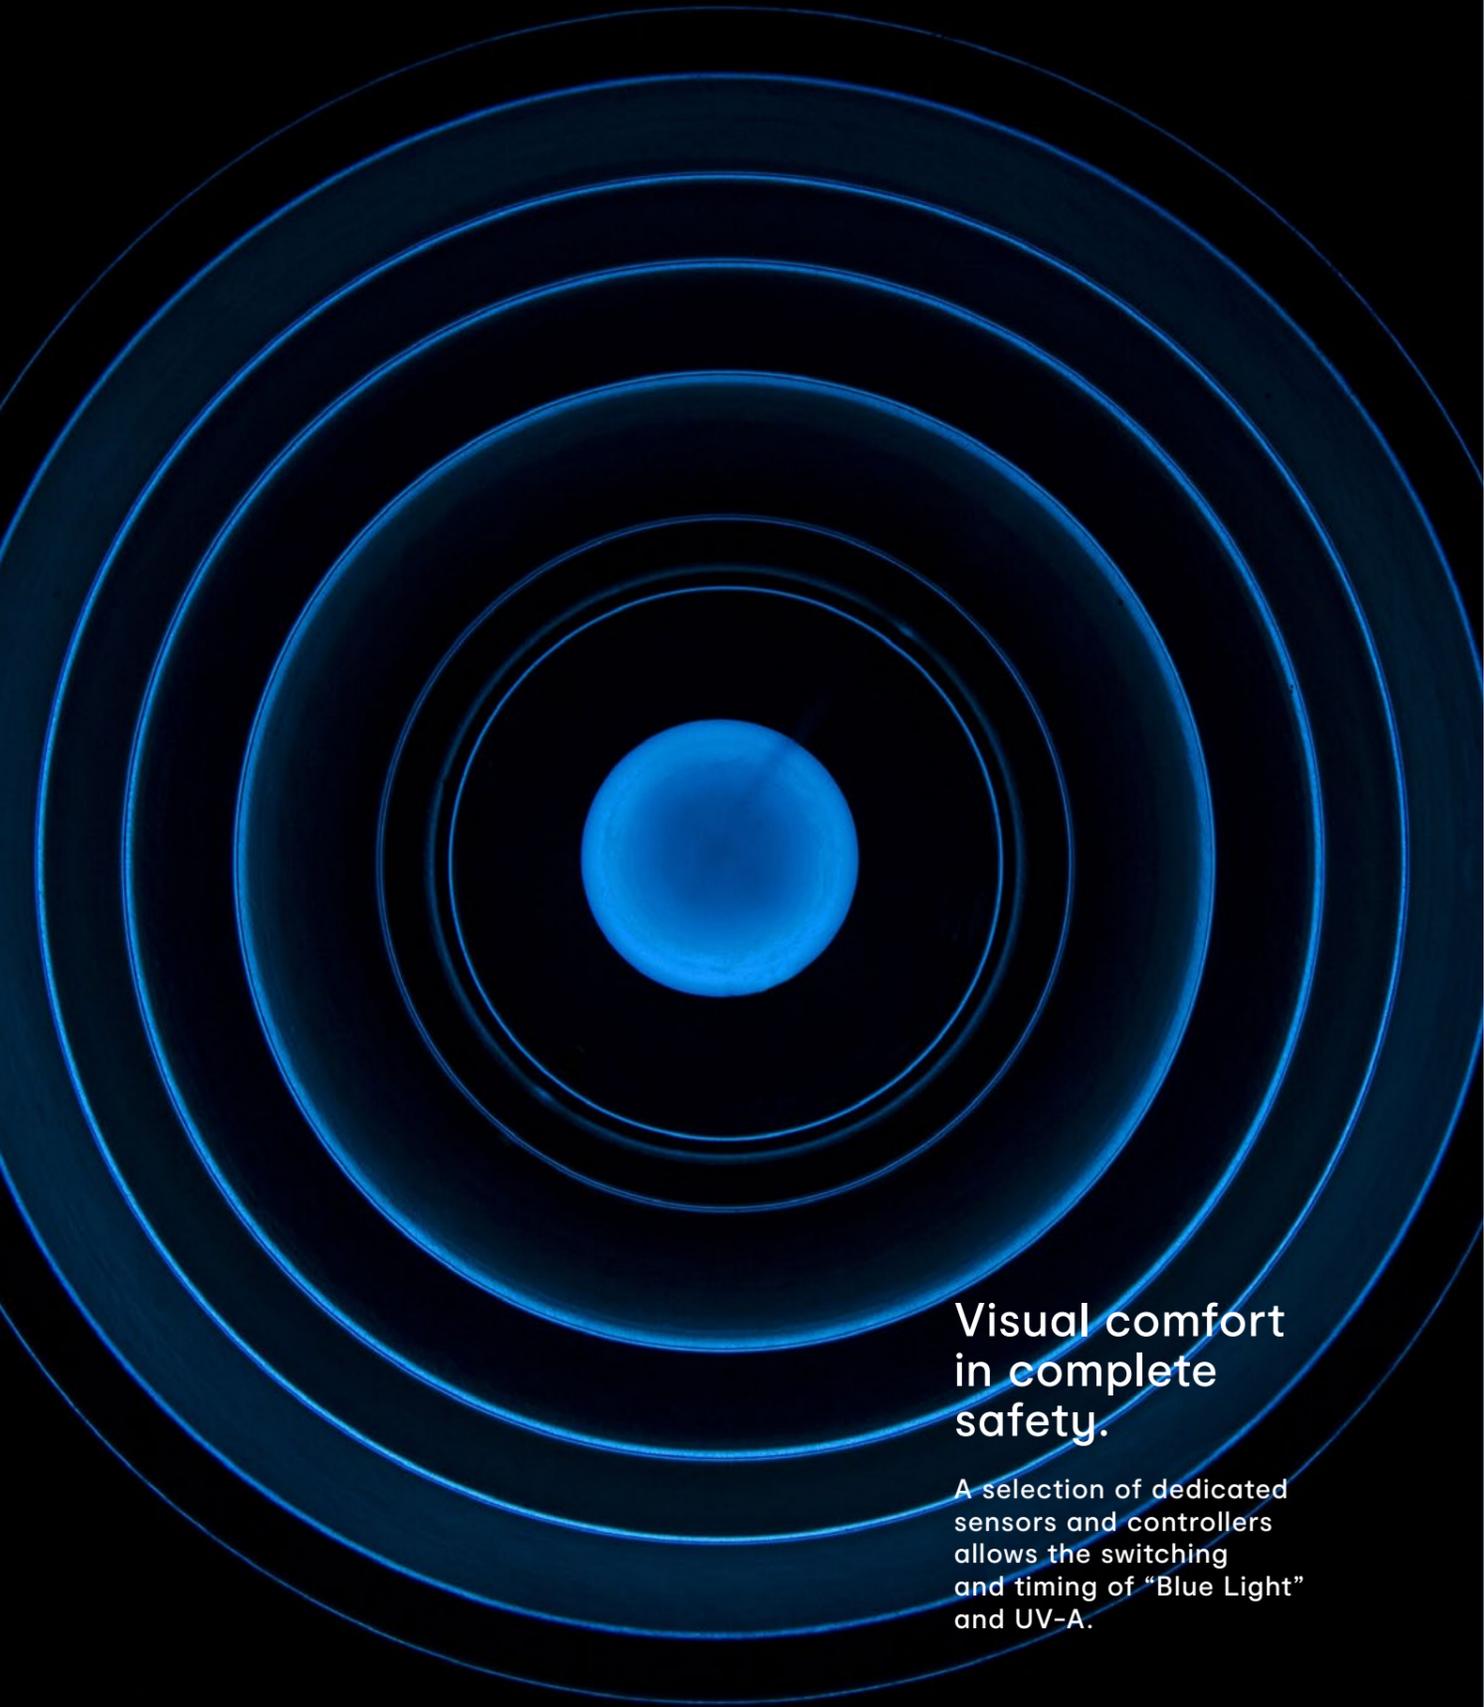

REMOTE MANAGEMENT

Through the dedicated Mec Driver module it is possible to manage the parameters directly from a smartphone or tablet with the utmost ease of use.

Human Centric Light: the ideal light at any time.

PROGRAM THE IDEAL LIGHT
FOR EVERY MOMENT OF THE DAY
AND FOR EVERY ACTIVITY

Visual comfort in complete safety.

A selection of dedicated sensors and controllers allows the switching and timing of “Blue Light” and UV-A.

Blue light, UV-A and UV-C.

**LIGHT MANAGEMENT ALSO
AS A SOLUTION AGAINST
BACTERIA AND VIRUSES**

We placed the issue of sanitizing environments at the center of our investments and extended the “Lighting Intelligence” program: a selection of

linear lamps, equipped with specific LED modules, is available in a single solution which allow to alternate white light and bactericidal function.

Blue Light

A wavelength of 465 nm of the visible spectrum which, with a minimum exposure of two hours, helps to reduce the presence of bacteria and bad odors on fabrics and surfaces.

UV-A

An advanced solution which, thanks to the action of ultraviolet rays, allows a considerable reduction of microbes in about half an hour.

UV-C

Tailor-made solutions with UV-C LEDs for maximum antimicrobial efficacy in professional and domestic environments.

We design for the world: certified for all markets.

“Thanks to the experience and expertise gained over the years, we constantly provide client companies with certified products that are immediately ready to be sold in the main countries of the world: business opportunities multiply, facilitating international distribution.

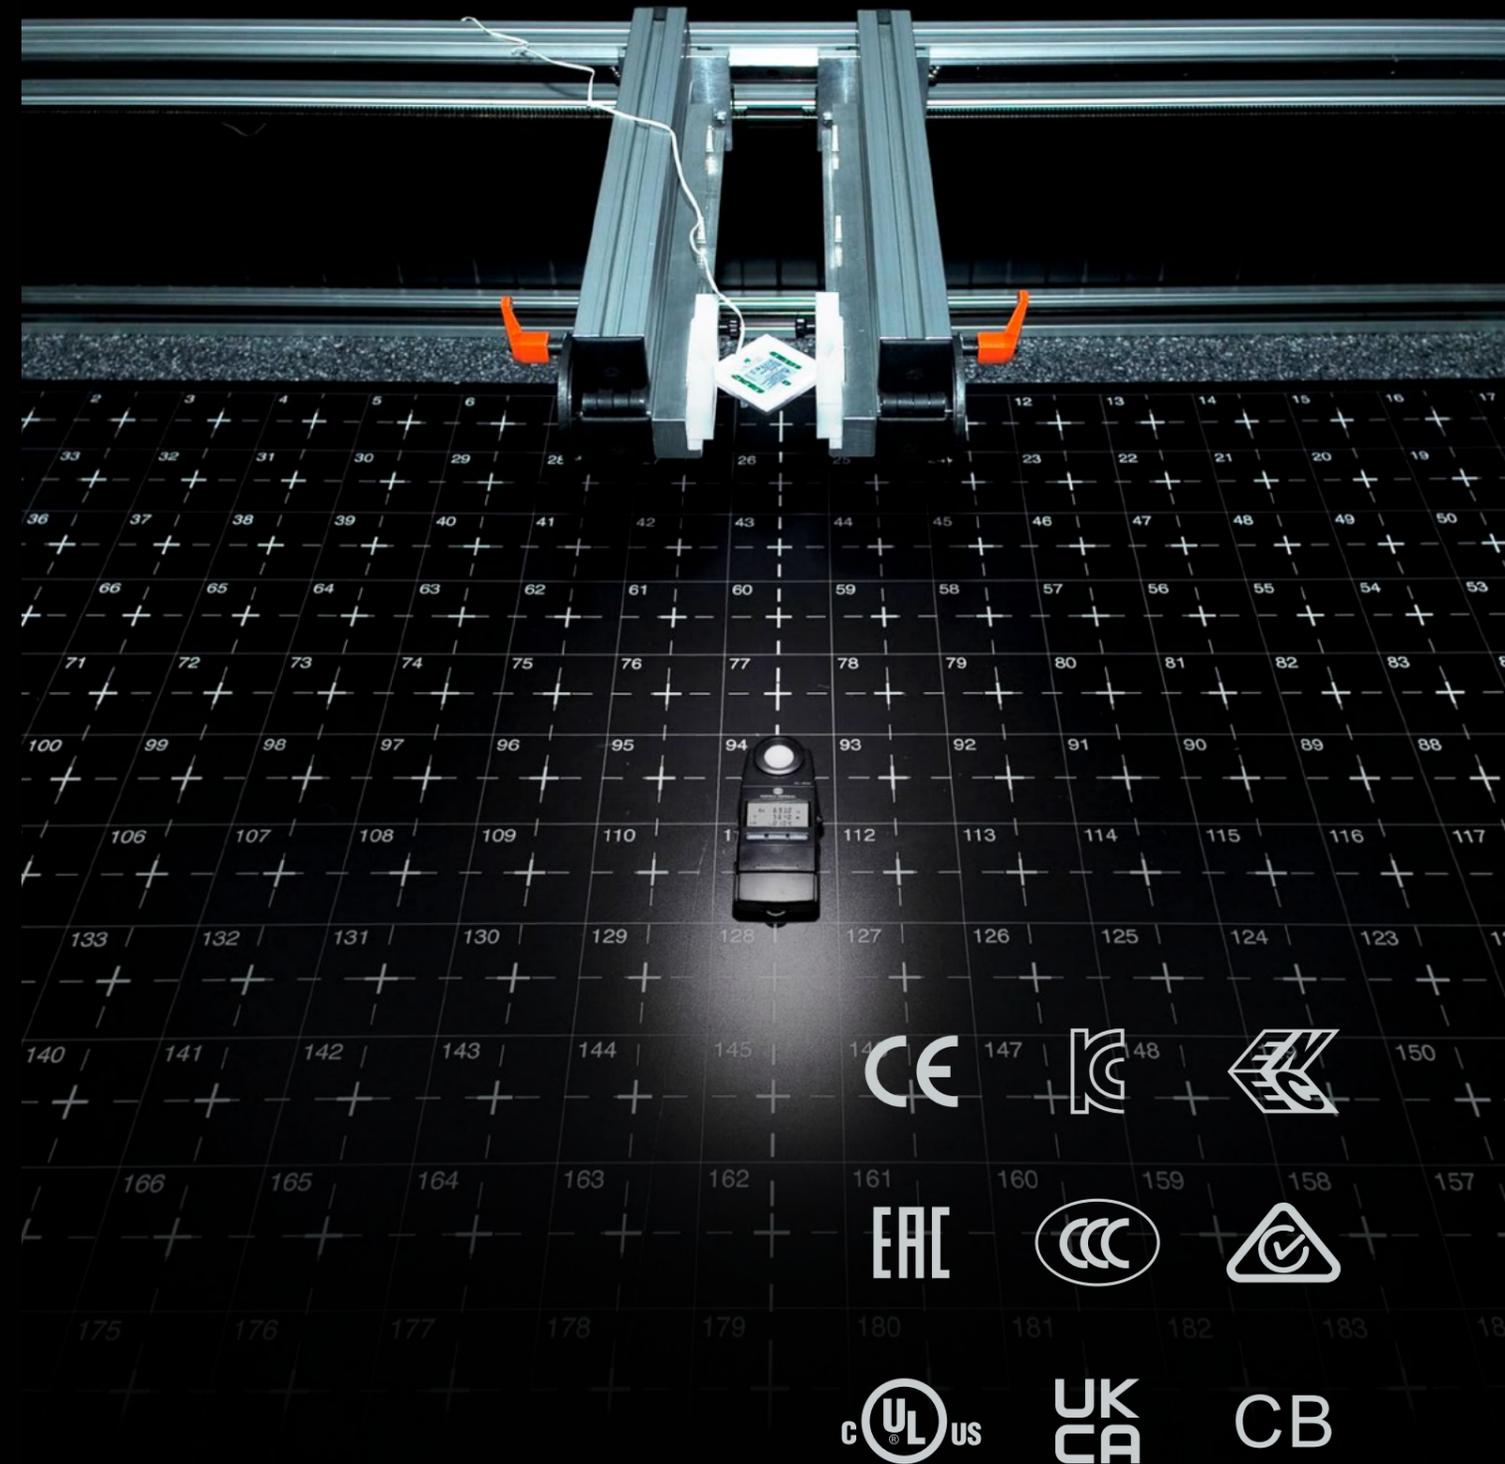

Recent investments in internal certification laboratories make obtaining the requirements and brands ever faster,

to support the export of our partners in real time even in the event of an update of the regulations.

L&S products are already designed in such a way as to meet the requirements imposed by the various regulatory standards, thus anticipating any future needs.”

Test lab for certifications.

The internal laboratory guarantees safety and reliability through continuous tests, with internal and external offices, providing the necessary documentation to obtain any type of certification.

FOR SALE SUPPORT

One solution provider.

We are able to offer a single integrated, complete, coherent product system. We provide all the light elements necessary to properly illuminate an environment. Normally, in fact, those who produce and sell lighting products for furniture do not deal with architectural light and vice versa.

Instead, we offer all these solutions, allowing you to have a single partner for all your interior lighting needs.

A bespoke service.

We offer a tailor-made service dedicated to each customer, we try to take care of all the needs that our clients may have to design the right light.

We cultivate partnerships such as ASSIL, the national association of lighting manufacturers, and collaborations with established architecture and design firms, with the educational and research sector, such as the collaboration with ISIA Roma Design, a University Institute for Industrial Design training.

Versatile
applications
to provide

a full range
of products.

WE PROVIDE THE BEST
SOLUTION FOR EACH
INDIVIDUAL PROJECT
IN THE DIFFERENT
FIELDS OF APPLICATION

01. Residential

Optical and technical research

to ensure the right level of lighting on the worktop.

Dedicated solutions

that guarantee protection against dust and water infiltration.

Integrated systems with accessories

that seamlessly blend with the interior design.

Rail and rack systems

complete with lighting and shelving for the composition of walk-in wardrobes.

Control systems and sensors

to facilitate lighting management.

Connections and electrifications

designed for space flexibility and adaptability.

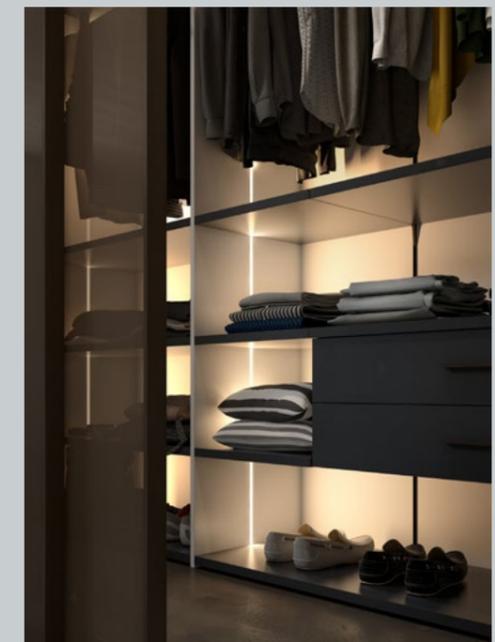

A range designed for furniture making and interior design process integration, for comfortable, easy-to-use, functional lighting.

The attention to the quality of light, always homogeneous and comfortable, the integration of accessories and complements and the development of cutting-edge control systems, contribute to improving the usability of the home environment.

Kitchen and living

Bathroom

Walk-in wardrobe

Jeweller's shops

Mass market retail

Eyewear

02. Retail

High colour rendering

to ensure display perception quality.

Light source miniaturisation

lorem ipsum dolor sit amet adipisci.

Shelves with integrated lighting

lorem ipsum dolor sit amet adipisci.

Backlighting

used both as a communication tool and to highlight specific product categories.

UV- and IR-free LEDs

ensure that products on display are not damaged.

Custom-made integrated shelves

lighting and retrofitting.

Architectural lighting

and professional ceiling solutions.

Lighting planning and consulting

lorem ipsum dolor sit amet adipisci.

Lighting systems and electrified structures designed to highlight the various functional and aesthetic characteristics of

each product, enhancing the product perception on display and taking the customer throughout the purchasing process.

03. Industrial

For elevators' cabins

spotlights, linear devices and decorative light panels.

For escalators

step lights and lighting contouring.

For refrigerated counters and wine storage

dedicated lighting.

A design oriented approach

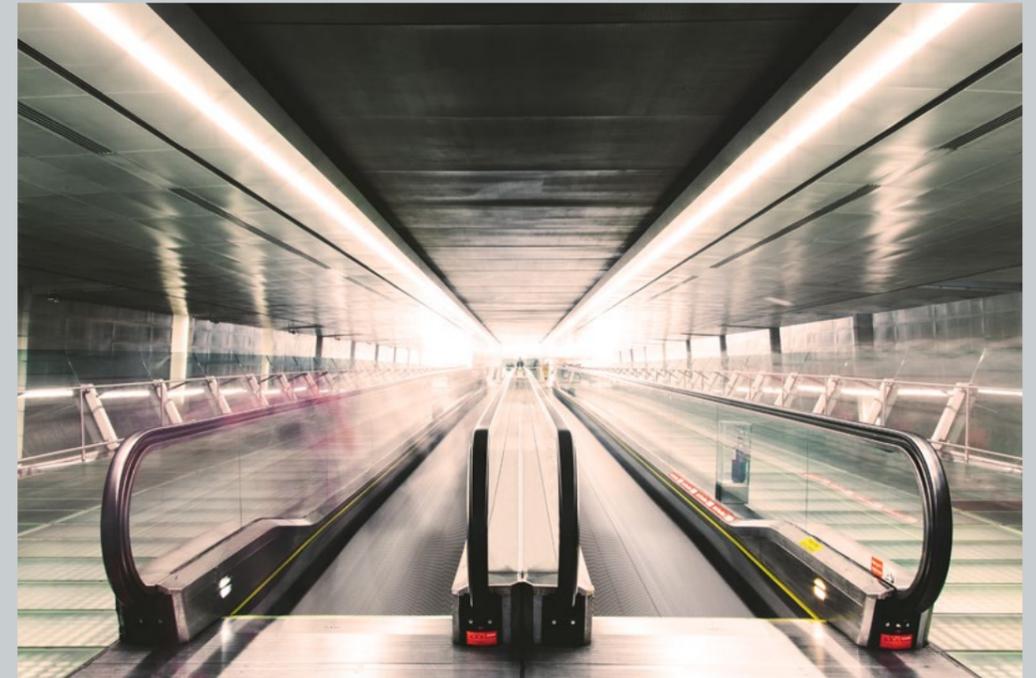

for the integration of lighting systems in cooker hoods.

Lighting integration in outdoor environments

for awnings and pergolas.

Our design expertise make us the ideal partner for companies interested in co-development and production of lighting systems, with the aim to improve their products.

Escalators

Elevators

Industrial refrigeration

04. Museum

Remote control

Light intensity and temperature are adjusted remotely to ensure that brightness levels are suitable at all times and are in line with conservation parameters for the various types of works on display.

Colour perception

Colour perception is similar to that achieved with solar lighting.

Conservation that does not alter the artwork

Conservation that does not alter the artwork: UV and IR-free, reduced blue light, no heat emissions from irradiance or induction, integrated relative humidity monitoring sensor, compliance with fire safety regulations.

Distribution of light

Even distribution of light provides the greatest viewing angle and prevents glare and reflections.

Light at the service of the world of art in all its forms: we supply museums, galleries and exhibitions with bespoke integrated

lighting solutions that enhance visitor experience, all in full compliance with the strictest artwork conservation parameters.

05. Marine

An unforgettable holiday

Light must contribute to create an ambience that makes a holiday unforgettable.

Functionalities and wellbeing

The lighting designed for the inside of cabins, bathrooms, walk-in wardrobes and common spaces meets specific criteria aimed to enhance both the functionalities of the different areas and the feeling of wellbeing, by controlling the intensity and colour of light.

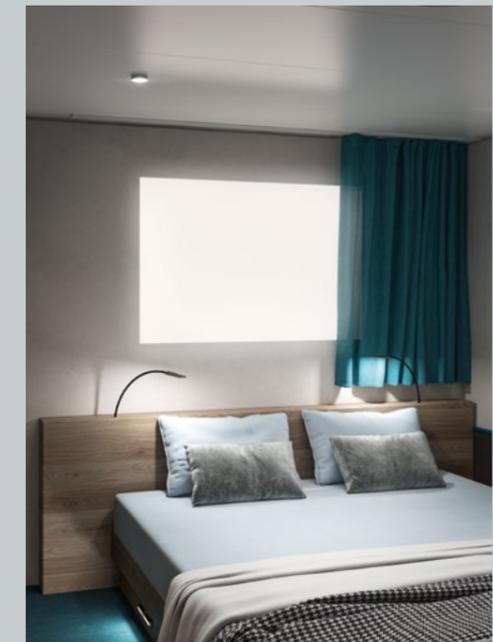

Lighting for the interiors of cruise ships and liners is of the utmost importance when it comes to passenger comfort.

In collaboration with architects, interior designers and shipowners, we design and create professional, tailor-made solutions that respect the style and identity of the ships.

Suite

Cabins

EASY-TO-INSTALL system

06. Distributors

Dedicated communications tools

Dedicated customer after-sales

“Easy-to-install” and “Plug&Play” solutions

Fully compliant with current safety regulations

A full range of lighting products for each segment, plus a dedicated range of distributor support services to help promoting sales.

We provide training for our partners’ sales forces and technicians at our showrooms, on customer’s premises or online.
